1. PURPOSE

With regard to the "Environment-related Substances to be Controlled ('Controlled Substances')" contained in the parts and devices employed in Sony Group electronics products, this Standard clarifies (1) banned substances, (2) substances to be phased out, and (3) exempted substances and their uses, in order to realize the following aims and objectives:

- 1) To prevent the above-mentioned substances from being used for Sony Group electronics products;
- 2) To comply with related laws and regulations;
- 3) To reduce the influence of the above substances upon the ecosystem; and
- 4) To contribute to the preservation of the global environment.

2. SCOPE

2.1 Scope applicable to parts and materials

Targets are the parts, materials, and other goods that are procured by the Sony Group, or by third parties to which the Sony Group outsources the design and manufacture of its electronics products.

The targets need to satisfy the threshold levels specified in this Standard.

Target parts and materials:

- Semi-finished products (e.g. modules, functional units, board assemblies, and other assembly parts)
- Parts (electrical parts, mechanical parts, semiconductor devices, PWBs, recording media)
- Screws
- Accessories (mice, remote commanders, AC adaptors, and other accessories with which you can use products)
- Materials constituting subsidiary parts and materials (e.g. adhesives, adhesive tapes, soldering materials, etc.) used for products
- Printed materials (e.g. instruction manuals, warranty cards, additional product/parts information)
- Repair parts (The application of some repair parts for products on the market shall be followed the instructions on the separately issued notice.)
- Packaging components and materials (See Section 4.2.1 "Definition of packaging components and materials" for details.)
- Batteries

2.2 Scope applicable to products

- 1) Sony Group electronics products that are designed and manufactured by the Sony Group for sale, loan, or distribution
- 2) Sony Group electronics products being sold and loaned or distributed with the Sony Group's logos on them, whose design and/or manufacture are outsourced to companies other than Sony Group
- Electronics products of companies other than Sony Group whose design and/or manufacture are outsourced to the Sony Group (except when the parts and materials are specified by the companies other than Sony Group)

Regarding the use of substances prohibited or restricted by regional or country laws and ordinances, the laws and ordinances must be observed and followed even though the substances and their uses are not clearly regulated in this Standard.

3. TERMS AND DEFINITIONS

In this Standard, terms are defined in the following manners:

1) "Environment-related Substances to be Controlled ('Controlled Substances')"

Among the substances contained in parts and devices, "Environment-related Substances to be Controlled ('Controlled Substances')" are those which, according to Sony Group's judgment, have significant environmental impact on both humans and the global environment.

2) Management Levels (abbr: Mgmt level)

To manage the above-mentioned substances, the following Levels and Exemption are used:

a) Level 1

The substances and their applications classified into this Level are those that are banned for the use in parts and materials.

b) Level 2

On the date set in each table, the substances and their applications in the respective tables shall be reclassified into Level 1.

c) Level 3

Technical investigations on substances and their applications are conducted.

d) Exemption

Not subject to Level 1, Level 2 and Level 3 because of reasons also being reflected by exemptions from laws. Technical investigations and monitoring of substances and their applications are conducted as necessary.

3) Contained

"Contained" means that a substance remains in parts, devices, or their materials because of addition, filling, blending, migration, adhesion, etc., whether intended or not. When a substance is unintentionally blended, migrated, adhered, or otherwise remains in a product in a processing or logistics process, this situation is also regarded as "Contained."

4) Intentionally added

"Intentionally added" means a situation where a substance is contained in the part, device, or its materials because of deliberate addition, filling, blending, or adhesion, in order to provide a specific characteristic, appearance, property, attribute or quality.

5) Homogenous material

"Homogenous material" means one material of uniform composition throughout or a material, consisting of a combination of materials, that cannot be disjointed or separated into different materials by mechanical actions, such as unscrewing, cutting, crushing, grinding and abrasive processes.

6) Material

"Material" means substance or mixture within a product or product part.

7) Part

"Part" means an article to be manufactured until it turns into an end product (the final article which is the outcome of assembling, processing or manufacturing chemical products and/or parts).

8) Article

"Article" means an item of specific shape, appearance or design created during manufacture which substantially determines functions in final use rather than functions provided by its chemical composition.

9) Product

"Product" means a part or an end product which is delivered to a customer as the outcome of business activities of the organization.

10) Target

"Target" is an object or element (e.g. parts, materials, applications or processing) that might trigger further obligations depending on the defined "management level."

11) Threshold level

"Threshold level" is a condition or concentration limit that might trigger further obligations depending on the defined "management level."

Notes: * Equal to or above this concentration limit is applicable.

* When criteria such as 'Intentionally added' and a numerical value are shown in 'threshold level,' both of them shall be satisfied.

12) Effective date of the ban on the delivery

This indicates the date on or after which Sony Group won't accept the parts and/or materials.

13) Battery

"Battery" means any source of electrical energy generated by direct conversion of chemical energy and consisting of one or more primary battery cells (non-rechargeable) or consisting of one or more secondary battery cells (rechargeable). Button Cell is included.

14) Button Cell

"Button Cell" means any small round portable battery whose diameter is greater than its height and which is used for special purposes such as hearing aids, watches, small portable equipment and back-up power

15) Battery Pack

"Battery Pack" means any set of batteries that are connected together and/or encapsulated within an outer casing so as to form a complete unit that the end-user is not intended to split up or open

4. MANAGEMENT STANDARDS FOR "ENVIRONMENT-RELATED SUBSTANCES TO BE CONTROLLED"

4.2 Additional rules for packaging components and materials

4.2.1 Definition of "packaging components and materials"

Packaging components and materials are defined as products made from any materials and components of any nature to be used for the containment, protection, handling, delivery and presentation of goods, from raw materials to processed goods from the producer to the user or consumer.

Note: The definition excludes the components and materials for the returnable boxes, which are reused or recycled under the control of carriers or parts suppliers, and are not disposed of by end-users or Sony Group.

It also excludes packaging components and materials that are clearly discarded at Sony Group site.

Formaldehyde

The wooden products (e.g. speakers and racks) made from fiberboard, particleboard, or plywood, which are employed in products, are required to satisfy in accordance with the following standards.

Threshold level (emission content): Obtain the value by any one of the following methods.

1) [With a chamber method]

Concentration in the air: Equal to or less than 0.1 ppm (or 0.124 mg/m³) in an air-tight test chamber

whose volume is 12 m³, 1 m³, or 0.0225 m³

Heavy metals (cadmium, lead, mercury and hexavalent chromium)

Packaging components and materials are required to be tested in accordance with the following standards (recommended).

For hexavalent chromium:

1) First analyze total chromium content and verify that the total concentration of cadmium, lead, mercury and total chromium is less than 100 ppm. When analyzing, the same sample preparation methods as those used for cadmium and lead are applicable. If this total concentration is more than 100 ppm, follow instruction of 2)

Standards for four heavy metals measurement (recommended)

Mercury: IEC 62321-4

Cadmium, Lead and Chromium: IEC62321-5

2) If total concentration is more than 100 ppm as the result of the analysis specified by 1), verify that the sum of the cadmium, lead and mercury concentration is less than the 100 ppm limit. When the sum of the cadmium, lead and mercury concentration is less than the 100 ppm limit, analyze and confirm that no hexavalent chromium is present, using the standard methods for detecting hexavalent chromium.

5. REPLACEMENT OF CHEMICAL SUBSTANCES ACCORDING TO "SONY GROUP ENVIRONMENTAL MID-TERM TARGET"

Sony Group declares in "Sony Group Environmental Mid-Term Target" that:

Sony Group analyzes the use of chemical substances and the contents in parts and products.

Based on the risk evaluation, Sony Group identifies and discontinues high-risk uses of these substances.

5.1 Polyvinyl chloride (PVC)

PVC may pose a risk to the environment if disposed of improperly. Another concern is that PVC might contain various other chemical substances, including plasticizers and stabilizers, which could pose risks to the environment and human health.

Sony Group is concerned with the possibility that in particular its small electronics products in developing countries could be collected for obtaining valuable materials, and then the unwanted parts could be improperly incinerated and disposed of in landfills. Considering the impact of these activities on the environment, Sony Group will replace PVC with alternative substances for the parts and materials as listed below.

5.2 Brominated flame retardants (BFR)

Some BFRs are harmful to human health and tend to remain in the environment and accumulate in living organisms. As in the case of PVC, improper incineration of BFRs carries a risk of releasing harmful substances into the environment. Considering the impact of these activities on the environment, Sony Group will replace BFR with alternative substances for the product categories or models as listed at below web site link.
